

FLY: MAIN FEATURES AND USP's

FLY is a Workspace Table collection designed by Lievore Altherr Molina. It is composed by tables of different dimensions, with the possibility of using different materials for tops and the necessary accessories to be used in this type of spaces.

The main **USP's** of FLY are:

- **Sober and Elegant Design:**
 - The bevelled shape of the top and the slender design of the legs allow obtaining a light and floating appearance of the table from all the vision angles.
 - In the case of needing an extension top, it is integrated in a natural way in a single piece providing a unique and attractive appearance.
- **Easy assembly:** the table assembly is extremely simple. Unlike the programs of Tables for Traditional Workspaces that are usually complicated to assemble, the FLY Table assembly is done with only four screws.
- **Complete collection:**
 - The system offers a wide range of dimensions, from individual work tables of reduced dimensions (140x70 cm) to large meeting tables (240x120 cm).
 - It includes the necessary accessories to divide work spaces, manage the electrification or divide the work stations.
 - Different material tops are offered to adapt to different environments.

Materials:

- Frame: structure in coated steel
- Top: Wood or Lacquered

Models: different dimension tables with different finishes are offered.

Spaces where fits perfectly:

- **Offices**
- **Home Office**
- **Coworking spaces**
